

PHI *MultiPak* Training - June 21, 2010
Preliminary Agenda
Ochsenfurt, Germany

To all class participants:

For this training class we will use *MultiPak* Version 9. To receive the full benefit of the class you must bring your own laptop computer with *MultiPak* installed. If you do not already have *MultiPak* Version 9 we will have CDs available to load *MultiPak* Version 9 for use in the class. Depending upon your situation we may need to remove the software when the class is finished.

The class is designed for novice users. If you have specific questions please bring them to the class. If you have questions about specific data files please bring them on a memory stick as there may be time at the end of the class to look at them and answer your questions.

There will be two classes running in parallel. One for the XPS instrument data reduction and one for Auger instrument data reduction.
